## 1. RECEIVING AND RECORDING

INPE's Receiving Station at Cuiabá, MT, operates normally the two tracking and receiving systems it has installed, the old one (1973) for Band S only and the new one (February 1983) for dual S- and X-band.

Both MSS and TM recording capabilities are functional. The old RBV recorder was transferred to the Processing Station at Cachoeira Paulista to be used in playback as a backup to the existing one.

Routine recordings are being made for Landsat-4 MSS over full acquisition range and (since April 6, 1984) Landsat-5 TM over the Brazilian territory. Therefore, INPE maintains an 8-day revisiting cycle, although with alternating instruments.

Limited Landsat-5 MSS recordings have been made over selected areas where special interest exists.

Due to the restrictions to the number of TM scenes transmitted to ground stations, as well as to the higher costs of recording and storing TM data, recording over other countries is planned to be subject of special arrangements between each interested country and Brazil, after accordance from NOAA.

From October 1983 to September 1984 the Station recorded:

- 630 MSS passes from Landsat-4
- 44 MSS passes from Landsat-5
- 273 TM passes from Landsat-5.

Support to the NASA Backup Plan for MSS data also remains active.

## 2. PROCESSING

### 2.1 - MSS SUBSYSTEM

The Electronic and Photographic Laboratories operated with some restrictions during the period of this report. The mean time between failures of the equipments is decreasing steadily due to age (more than 12 years for most machines). For example, our color production line was down during several months.

First generation film originals and CCTs were produced under user request only. Quicklook imagery kept being generated for the full acquisition, although with some weeks of delay.

On the other hand, the Precision production line became fully operational and is supporting several user cartographic applications under guidance of the Cartographic Applications Laboratory.

Development of a fully digital geometric correction and mosaicing system is well under way, taking advantage of two high-capacity disks that were incorporated into the PDP-11/34 support computer system. As a first byproduct, MSS Band Interleaved by Lines (BIL) CCTs are now being offered to the user community as an alternative to the traditional BIP2 format.

Up to September 30, Processing Labs processed:

- 474 full MSS passes in Quicklook form;
- 575 MSS scenes in high resolution 70mm film;
- 208 MSS CCTs for external use.

## 2.2 - RBV SUBSYSTEM

RBV processing was not resumed during the period of this report. The derivation of new shading-correction tables has had its priority lowered in face of more urgent tasks and the advent of the 30-meter resolution TM data. Since our line is fully analog and cannot profit from computer help, production of good quality RBV images will require extensive human work.

## 2.3 - TM SUBSYSTEM

In February, 1984 the final Acceptance tests for the TM Processing System were concluded at Cachoeira Paulista. The tests employed only Landsat-4 data from 2 HDDTs recorded and provided by NASA as an aid to integrate the system, once INPE had no direct-recording TM data by that time.

After the launch of Landsat-5 in March and start of TM transmissions to ground stations in April, several weeks of effort were dedicated, mainly in the software area, to adjust the embedded satellite/instrument parameters to the new characteristics and coefficients. Some of the data involved became available only at the LTWG meeting in June.

Partly as a result of that, production of user-deliverable high resolution TM imagery so far has not been voluminous. A considerable amount of time was also dedicated to establish compromise procedures and parameters for enhancing the brightness/contrast of most TM spectral bands on film to make them suitable to the wide variety of ground truths across Brazil. The management software also had to undergo several small corrections to appropriately handle Landsat 5 and mainly to migrate from a development environment to a real-life production situation where several operational requirements and constraints have to be taken into account.

After a steady state was reached, Quicklook images were systematically generated for all acquired passes within at most two weeks after reception.

Up to September 30, the Processing Labs processed (considering only user-deliverable items):

- 262 full TM passes in Quicklook form;
- 89 TM scenes in high resolution 5" film.

TM CCTs not been requested up to this moment. Besides their considerably higher cost, the Brazilian user community has been traditionally more oriented towards photographic products, and it is expected that, after users get more acquainted with TM data, digital products begin to be requested. INPE itself is still adapting existing application software to profit from TM CCTs. Foreign users probably would have requested CCTs if data over other countries were available.

At present, effort is being dedicated to ultimate the software modifications needed to release photographic Quadrant products to users. They have been asking for these products, despite their not being in the first Price List, mainly due to interest in large (> 1:250,000) scales.

#### 2.4 - SPECIAL PRODUCTS

Although not intended for short term inclusion in the list of user-deliverable products, some custom processing software has been developed for limited applications. An enhanced TM image of Brasilia, color composited with bands 2, 4 and 7 is shown as an example in Annex A. The photographic original scale was 1:500,000.

### 3. DISTRIBUTION

From October 1983 to September 1984 INPE distributed a total of 3585 Landsat products, 3377 of them as photographic frames and 208 as digital products (CCTs). Quarterly summaries covering that period and showing also the user distribution profile, are included in Annex B, along with historical data concerning acquisition, processing and dissemination of Landsat data.

The MSS/RBV products Price List was updated on May 1984 with the inclusion of MSS Quicklook products and BIL CCTs. Prices for the existing products were not changed, except for the high-contrast options. A new Price List will be effective November 1st, 1984, with the sole changes of a further reduction in the price of high-contrast products and the removal of 800 bpi BIL CCTs.

The first TM products Price List was published in July 1983 as a preliminary one. A new Price list will follow starting on November 01, including photographic Quadrant products, which are expected to be available after January 1985. Prices for the existing products were maintained, since too little volume was distributed up to the present to allow a better estimate of the involved production costs.

The new Landsat Price Lists for MSS/RBV and for TM products are enclosed as Annex C.

A revised Landsat-4/-5 coverage map was prepared and has been distributed to users (see Annex D). At this moment we register 1477 Landsat data users, 242 of them from foreign countries.

The Order and Production Management system has been extended to handle TM products through the Photolab and down to final shipping. The TM software delivered with the processing system managed just the first generation production steps. What remains to

be done is the integration of the order handling with the Accounting and the User index. However, this will require a major software effort and there is no precise forecast of when the task will be addressed.

PRICE LIST -- NOVEMBER 01, 1984 TO APRIL 30, 1985

LANDSAT DATA -- THEMATIC MAPPER (TM)

ATTENTION: Prices include the NOAA distribution fee of US\$25.00 for each photographic product and US\$ 300.00 for each complete scene in digital form. This fee does not apply to Quick-look Products.

PHOTOGRAPHIC PRODUCTS

A) Quick-Look Products (uncorrected/low resolution images meant for cloud cover and quality evaluation; available in just one spectral band; generally Band 3; full frame only; scale and size approximate)

Scale	Medium	Size	Code	Price(US\$)
1:4,000,000	Paper	40mm	0020	3.00

B) Bulk Products (System-corrected geometrically and radiometrically; Sun elevation-compensated)

Obs.: FF = full frame; QD = quadrant (\*)

B.1) Black-and-white

FF/QD	Scale	Medium	Size	Code	Price(US\$)
FF	1:1,000,000	Film negative	185mm	0302	110.00
FF	1:1,000,000	Film positive	185mm	0312	100.00
FF	1:1,000,000	Paper	185mm	0322	75.00
FF	1:500,000	Paper	370mm	0323	140.00
FF	1:250,000	Paper	740mm	0324	250.00
QD	1:500,000	Film negative	185mm	4302	135.00
QD	1:500,000	Film positive	185mm	4312	125.00
QD	1:500,000	Paper	185mm	4322	100.00
QD	1:250,000	Paper	370mm	4323	165.00
QD	1:125,000	Paper	740mm	4324	275.00

B.2) Color (normal band usage 2/3/4 for false color and 1/2/3 for true color)

FF/QD	Scale	Medium	Size	Code	Price(US\$)
FF	1:1,000,000	Film positive	185mm	1312	200.00
FF	1:1,000,000	Paper	185mm	1322	180.00
FF	1:500,000	Paper	370mm	1323	240.00
QD	1:500,000	Film positive	185mm	5312	225.00
QD	1:500,000	Paper	185mm	5322	205.00
QD	1:250,000	Paper	370mm	5323	265.00

Additional fee for band combinations different from the above (master color negative retained): US\$100.00.

(\*) Quadrant products available starting January 1985.

CACHOEIRA PAULISTA-SP - R. PRES. DUTRA, Nº 40,0 - CX. POSTAL 01 - FONE (0126) 61377 - TELEX (012) 1160 - CEP 12.630  
CUIABÁ-MT - MONJO DA CONCEIÇÃO S/N - CX. POSTAL 714 - FONE (066) 321-9314 - TELEX (0652) 114 - CEP 78.000  
NATAL-RN - AV. SALGADO FILHO Nº 1000 - CX. POSTAL 130 - FONE (084) 231-4733 - TELEX (0842) 185 - CEP 58.000  
FORTALEZA-CE - DISTRITO DE EUSEBIO - CX. POSTAL 1261 - FONE (085) 224-4966 - CEP 60.000

**DIGITAL PRODUCTS** (system-corrected radiometrically; geometric corrections not applied, except for those relative to the along-line scanning mirror movement, which are applied through nearest-neighbor resampling.)

A) Full frame ( n = number of bands, from 1 to 7; '\*' = 'times')

Format	Density	Tapes	Code	Price (US\$)
RIL	1600 bpi	n*2400'	241n	100.00 + n * 550.00
BSQ	1600 bpi	n*2400'	243n	100.00 + n * 550.00

B) Quadrant (all 7 bands or just 3 in any combination)

Bands	Format	Density	Tapes	Code	Price (US\$)
3	RIL	1600 bpi	1*2400'	6413	600.00
3	BSQ	1600 bpi	1*2400'	6433	600.00
7	RIL	1600 bpi	2*2400'	6417	1300.00
7	BSQ	1600 bpi	3*2400'	6437	1340.00

- NOTES: 1) Payments must be made in advance through a nominal check to Instituto de Pesquisas Especiais. An account can also be maintained for quickest servicing.
- 2) Prices include airmail delivery for photographic products; CCTs are normally airfreighted collect.
- 3) Normal servicing time is 15-20 days; CCTs can suffer an additional 10 days delay to obtain the necessary export license.

## LEGENDA

Centros fora do alcance de recepção  
ou da grade continental útil

ESCALA APROXIMADA 1/15.000.000

Projeção Policônica Oblíqua

Atenção -Centros muito próximos ao limite de  
alcance podem não ser sempre recebidos

-O centro da imagem pode variar  $\pm 20\text{Km}$   
em torno da aproximação nominal  
indicada

Revisão Junho 1984
